

Computer Vision Internship - Assessment

Instructions:

- Complete all 3 tasks below.
 - Submit your code (GitHub link or zip file) + a 1-page summary report (PDF).
 - Use Python (preferred versions: 3.8–3.10) and OpenCV.
 - Bonus points for clean code (comments, functions) and creativity.
-

Task 1: Basic Image Manipulation

Objective: Test your OpenCV basics.

Task:

- Load any image of your choice.
- Apply the following operations and save the outputs:
 - Convert to grayscale.
 - Apply Gaussian Blur.
 - Detect edges using Canny Edge Detector.

Deliverables: 3 processed images + source code.

Task 2: Mini Project — Color Detector

Objective: Test your Python + OpenCV skills and basic interaction handling.

Task:

- Create a Python script that:
 - Opens a webcam feed.
 - Displays the BGR values of the pixel wherever the mouse clicks.
 - (Optional Bonus) Display the closest color name.

Hint: Use OpenCV's `setMouseCallback()` function for mouse events.

Deliverables: Working Python script + screenshots or short video (optional).

Task 3: Simple Technical Documentation

Objective: Test your technical communication skills.

Task:

- Write a 1-page PDF report covering:
 - What you built.
 - Challenges you faced.
 - What you would improve if you had more time.

Deliverables: 1-page PDF document.

Bonus (Optional)

- Create a GitHub repository for your project.
 - Add a clear `README.md` file including:
 - Project description.
 - How to run the scripts.
 - Example outputs (screenshots/images).
-

Submission:

Once completed, please email us the deliverables at chimpvinehr@gmail.com.

Deadline:

The submissions should be made by **May 1, 2025, 4 PM**.
